

## THE LATEST IN CUSTOMIZED PUTTERS

By: Pam Borges on 05/02/11 12:14 AM

Can you imagine a putter with an adjustable length shaft that enables the ball to be picked up and marked on the green without the need to bend over? That's customization .... that's the *Nickel Putter No. 1 Pro*. It received a 5-Star rating by GolfTest USA, in every performance category, outranking the famed Odyssey 2 Ball Putter.

This German engineered precision designed putter is constructed with a CNC milled lightweight aluminum body enhanced by two lateral embedded counterweights to form one seamless unit. An elongated polymer insert poured into the club face traverses the entire club head enhancing contact with ball, providing an extended target area.

All Nickel Putter are equipped with adjustable grips that adjust to any incremental length between 31-37 inches, as well as rotational adjustments for golfers who consistently miss in one direction of target.

But the No.1 Pro model is the world's first putter designed to accommodate an attachable ball marking mechanism. Accessorize with their Ball Pick-Up device, the most advanced pick-up developed that attaches to the putter end to allow golfers to retrieve the golf ball out of the cup.
